

Project Title: ABC (Amazing Business Computing)

Problem Statement:

Small-scale business owners and student entrepreneurs often encounter difficulties in manually recording transactions, keeping track of inventory costs, and accurately monitoring budgets. Without an automated tool, computing daily financial status (profit versus loss) is prone to human error and time consumption.

Project Objectives:

1. To build a functional, menu based Python application that automates financial tracking for small businesses.
2. To provide an organized system for users to input item prices, manage capital budgets, and review previous purchases.
3. To deliver quick and precise profit and loss computations to assist in financial evaluation.

Planned Features:

- Interactive menu navigation using options A through D.
- Single and multiple item input capabilities.
- Budget entry and verification.
- Transaction history logs for past purchases.
- Automated financial calculations determining profit or loss.

Planned Inputs and Outputs:

Menu Selection: Capital or lowercase letters (A–G) to navigate the options.

Item Price: Numeric values (decimals allowed) representing the cost of items.

Budget: Numeric values representing the available funds.

Outputs: Text based menus, status check logs, and computed profit/loss statements in pesos.

Logic Plan (Flowchart)

Planned Features:

Main Menu Navigation: Continuous loop utilizing options A through D (A. Input Data, B. Check Statistics, C. Compute Profit or Loss, D. Exit).

Data Input Sub-Menu: Option A branches into sub-options for recording item names/prices with a continuous Y/N loop (1. Input Items) and setting capital (2. Input Budget).

Running Revenue Accumulation: Automatically sums up item prices as they are entered ($\text{total_revenue} = \text{total_revenue} + \text{item_price}$).

Statistics & History Check: Option B allows users to view stored records.

Automated Financial Analysis: Option C evaluates whether $\text{total_revenue} > \text{budget}$ to instantly output exact profit or loss statements.

Flowchart:
